SALOMON TECHNO LEGENDS

01 MIDSOLE CUSHIONING FOAMS

ENERGY CELL

Grip to play in all conditions. Developed with Salomon engineers and athletes since 1994 (Salomon exclusive patent), contaGRIP® combines varying compounds with different lug designs optimized for each sport. It provides durable traction for all seasons in dry and wet conditions, see the dedicated chart to discover all our different contaGRIP® families.

ENERGY CELL+

A high-rebound midsole compound that provides exceptional energy return along with substantial cushioning and durability.

fuze FOAM

An EVA compound engineered to use less artificial polymers.
Composed of 30% natural rubber, smooth yet dynamic.

opti FOAM

Lightweight, super responsive cushioning. A foam created by combining EVA and Olefin [OBC] to deliver long-lasting cushion and bouncy energy return.

opti FOAM+

A lightweight foam with superior energy absorption and the most energy return. Responsive and cushioned for resilient bounce and pop in highly responsive shoes. The most responsive and bouncy foam.

infini FOAM

Nitrogen-infused TPU-based foam used on recyclable models such as INDEX.03. Position it as plush, long-lasting cushioning with a sustainability angle.

opti FOAM²

optiFOAM^2 (100% TPU) is basically the best compromise for a training shoe.
Performances are almost the same as optiFOAM+ (slightly less resilient and bouncy) but less expensive.

02 CHASSIS

advanced CHASSIS

A molded insert embedded in the outsole. Providing strong lateral support and reassuring protection, it also delivers optimal mobility and flexibility.

active CHASSIS

A chassis made from a stiffer and denser material than the midsole foam. Designed for increased guidance, uncompromised agility and fluid freedom of movement.

4D CHASSIS

This stable chassis construction harnesses two different midsole components for enhanced foot control and active comfort. Found in our Quest 4.

SHANK

A molded piece between the outsole and the midsole that provides torsional rigidity and stability. At a lower level than a chassis.

SALOMON TECH LEGENDS GLOSSARY

03 GROUND FILTER & BLADES

energy BLADE

Lightweight, responsive plates connected to the midsole foam and sole geometry create an energy-infused alliance of velocity gain and smooth transitions. Fused into the sole, energyBLADE technology heightens your footwear experience by injecting power and propulsion into your stride.

PROFEEL FILM

Trail running protection.
A thin TPU film placed between the midsole and the outsole that helps filter out rocks and sharp surfaces, for more comfort and stability without compromising on flexibility to keep a natural foot flexion and fluid ride.

PROFEEL PLATE

A hybrid between an energyBLADE and a ground filter. Used to filter out sharp objects while maintaining dynamism, ideal for long distance runs for when your foot becomes very sensible.

04 UPPER

quickLACE

Minimalist and strong lace (4 times stronger than regular flat laces) for one pull tightening. Easy-on, easy-off.

sensiFIT

Foothold support.
Cradles the foot from the midsole to the lacing system, providing a secure and snug fit all round the foot. Your foot seat belt.

endoFIT

An internal fit sleeve designed to hug the foot in exactly the right places and provide a precise fit.

MATRYX®

High tenacity fibers woven together to provide an ultra-resistant, ultra-breathable upper material.

05 UPPER CONSTRUCTION

single layer MESH

A single layer of Mesh, close to the foot, for maximum feel, lightness, and breathability.

engineered SH

Engineered mesh is a structure that varies the weave to offer more support and durability or flexibility and breathability, according to the specific needs of the shoe.

3D MESH

With a unique and very precise design at thread level, our Custom Engineered Mesh delivers just the right balance of protection, foot hold, and breathability.

ripstop SH

Woven fabrics, often made of nylon, with reinforcement to resist tearing, ripping and abrasion.

SALOMON TECH LEGENDS GLOSSARY

06 WATERPROOF & INSULATION

adv.DRY

Salomon's new 3-layer waterproof laminate featuring a PFC-free membrane secured between a 100% recycled face and backing fabric.

adv.WARM

Salomon's new high-performance cold-weather insulation featuring 70% recycled.

activ.WARM

Our comfort insulation technology made with 90% recycled polyester. A lightweight insulation layer covers the mid-foot and toe area to create warmth in the most essential areas.

07 OTHER

contaGRIP

Grip to play in all conditions.
Developed with Salomon engineers and athletes since 1994 (Salomon exclusive patent), contaGRIP(R) combines varying compounds with different lug designs optimized for each sport. It provides durable traction for all seasons in dry and wet conditions, see the dedicated chart to discover all our different contaGRIP(R) families.

R·CAMBER

Inspired by Salomon's ski heritage, this curved midsole geometry helps you feel like you are floating over the ground.

MADE IN FRANCE

Bringing production closer to consumers is essential to reduce our carbon footprint. The corresponding model has been assembled in the ASF 4.0 (automated shoe factory), located in Ardeche, France.

Recyclable Model

Scan the QR code on the upper or the box to register the pair and to send them back to us at the end of its life to be turned into another product.

relieve SPHERE

relieveSPHERE technology designed to distribute pressure and absorb repetitive impact underfoot for lasting comfort. This pattern is derived from 6 years of research at the Salomon Sciences Laboratory.
